AI (Artificial Intelligence) with Academic Integrity

This project was built with the help of **ChatGPT** as an AI coding assistant.

What I used AI for:

- Generating the initial Flask server with JWT issuing.
- Adding JWKS endpoint with public key extraction.
- Debugging rubric errors and adjusting code until all cases passed.

Prompts I used included:

- "Fix the expired JWT test rubric error."
- "Explain this code."
- "Write `test_jwks.py` for pytest coverage."

As I researched this project while using AI, I reviewed, tested, and modified the AI's output to ensure the correctness and functionality of what it was recommending and saying.
